Designing Tall Buildings: Structure as Architecture

By Mark Sarkisian

Designing Tall Buildings: Structure as Architecture By Mark Sarkisian

The first of its kind, *Designing Tall Buildings* is an accessible reference that guides you through the fundamental principles of designing high-rises. Each chapter focuses on one theme central to tall-building design, giving you a comprehensive overview of the related architecture and structural engineering concepts. Mark P. Sarkisian provides clear definitions of technical terms and introduces important equations, to help you gradually develop your knowledge. Later chapters allow you to explore more complex applications, such as biomimicry. Projects drawn from Skidmore, Owings and Merrill's vast catalog of built high-rises, many of which Sarkisian designed, demonstrate these concepts.

This book advises you to consider the influence of a particular site's geology, wind conditions, and seismicity. Using this contextual knowledge and analysis, you can determine what types of structural solutions are best suited for a tower on that site. You can then conceptualize and devise efficient structural systems that are not only safe, but also constructible and economical. Sarkisian also addresses the influence of nature in design, urging you to integrate structure and architecture for buildings of superior performance, sustainability, and aesthetic excellence.

Editorial Review

Review

"Sarkisian is highly recognized as an innovative and visionary structural engineer with many years of many signature works of architecture, especially towers, to his credit. This is the perfect moment for his comprehensive book which takes stock of the most important achievements and best practices."

John Loomis, *Professor of Architecture, Author*

"Those who are not afraid of mathematical equations, technical graphs and diagrams, but lack the basic knowledge of the fundamental principles of designing tall buildings should check out *Designing Tall Buildings*....Sarkisian provides clear definitions of technical terms and introduces important equations."
Council on Tall Buildings and Urban Habitat
