Life in Moving Fluids: The Physical Biology of Flow, Revised and Expanded Second edition By Steven Vogel

Both a landmark text and reference book, Steven Vogel's *Life in Moving Fluids* has also played a catalytic role in research involving the applications of fluid mechanics to biology. In this revised edition, Vogel continues to combine humor and clear explanations as he addresses biologists and general readers interested in biological fluid mechanics, offering updates on the field over the last dozen years and expanding the coverage of the biological literature. His discussion of the relationship between fluid flow and biological design now includes sections on jet propulsion, biological pumps, swimming, blood flow, and surface waves, and on acceleration reaction and Murray's law. This edition contains an extensive bibliography for readers interested in designing their own experiments.

Editorial Review

Review

"Vogel ... has a deep knowledge of hydrodynamics and knows how to teach the subject. Many phenomena are explained more clearly in his book than in common fluid dynamic texts.... Beautifully produced."--**Jerry Gollub, *Physics Today***

"This edition includes more of everything: more physical concepts, more biological examples, more sources for additional information.... Vogel finds a way to make sense of even the least intuitive concepts."--**Mike May, *American Scientist***

Praise for the previous edition: "Required reading for students of biology at all levels of career development."--**Paul W. Webb, *Science***

"For biologists who want to come to the beginning of a quantitative understanding of a wide variety of adaptations, for general readers who want to see how fluid mechanics works in a varied and often surprising context ... this book, full of data, rich in up-to-date and well-appraised references, is a first-class opportunity."--**Philip Morrison, *Scientific American***

Users Review

From reader reviews:

Julia Jenkins:

The book *Life in Moving Fluids: The Physical Biology of Flow, Revised and Expanded Second edition* can give more knowledge and also the precise product information about everything you want. So why must we leave a very important thing like a book *Life in Moving Fluids: The Physical Biology of Flow, Revised and Expanded Second edition*? Several of you have a different opinion about guide. But one aim which book can give many data for us. It is absolutely suitable. Right now, try to closer using your book. Knowledge or info that you take for that, it is possible to give for each other; you are able to share all of these. Book *Life in Moving Fluids: The Physical Biology of Flow, Revised and Expanded Second edition* has simple shape nevertheless, you know: it has great and large function for you. You can appear the enormous world by open and read a book. So it is very wonderful.

Margaret Gray:

As people who live in the particular modest era should be update about what going on or information even knowledge to make these people keep up with the era which can be always change and make progress. Some of you maybe may update themselves by examining books. It is a good choice for you but the problems coming to a person is you don't know which one you should start with. This *Life in Moving Fluids: The Physical Biology of Flow, Revised and Expanded Second edition* is our recommendation so you keep up with the world. Why, because this book serves what you want and wish in this era.

Barbara Wheat:

Information is provisions for individuals to get better life, information today can get by anyone in everywhere. The information can be a information or any news even a concern. What people must be consider if those information which is in the former life are challenging be find than now could be taking seriously which one is appropriate to believe or which one often the resource are convinced. If you receive the unstable resource then you have it as your main information we will see huge disadvantage for you. All those possibilities will not happen in you if you take Life in Moving Fluids: The Physical Biology of Flow, Revised and Expanded Second edition as your daily resource information.

Anna Hart:

Playing with family in a park, coming to see the ocean world or hanging out with good friends is thing that usually you have done when you have spare time, after that why you don't try point that really opposite from that. One particular activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of knowledge. Even you love Life in Moving Fluids: The Physical Biology of Flow, Revised and Expanded Second edition, you may enjoy both. It is excellent combination right, you still need to miss it? What kind of hangout type is it? Oh can occur its mind hangout men. What? Still don't buy it, oh come on its known as reading friends.
