**Poisoned Planet: How Constant Exposure to Man-Made Chemicals Is Putting Your Life at Risk** By Julian Cribb

**By the author of *The Coming Famine*, this book sounds a wake up call: we cannot rely on governments or industry to clean up the toxic manmade chemicals we've surrounded ourselves with, it's up to us to repair our poisoned planet**

We want things to be cheap, convenient, and useful. Our food arrives contaminated with pesticides and wastes, wrapped in plastic made of hormone-disrupting chemicals. We bathe and dress our children in petrochemicals. Even our coffee contains miniscule traces of arsenic, cup by cup adding to the toxins accumulating in our bodies. Man-made chemicals are creating a silent epidemic. Our children are sicker; cancer, obesity, allergies, and mental health issues are on the rise in adults; and, frighteningly, we may be less intelligent than previous generations. A poisoned planet is the price we pay for our lifestyle, but Julian Cribb shows we have the tools to clean it up and create a healthier, safer future for us all.
