## **Editorial Review**

### **Review**

From the reviews of the third edition:

“This is the third edition of an extensive manual on the physiology and management of the patient injured by blast or projectiles. ... Surgical, emergency medicine, and critical care trainees with an interest in trauma or military service commitment are an appropriate audience for this book written by expert surgeons, intensivists, and anesthesiologists. ... Tables and line drawings reproduce well. A detailed table of contents lists authorship and groups the 45 chapters by content while the concluding subject index provides excellent access to topics.” (David J. Dries, Doody’s Review Service, October, 2011)
