Editorial Review

From the Back Cover

The book consists of 31 chapters in which the authors deal with multiple aspects of modeling, utilization and implementation of semantic methods for knowledge management and communication in the context of human centered computing. It is assumed that the modern human centered computing requires the intensive application of these methods as well as effective integration with multiple techniques of computational collective intelligence. The book is organized in four parts devoted to the presentation of utilization of knowledge processing in agent and multiagent systems, application of computational collective intelligence to knowledge management, models for collectives of intelligent agents, and models and environments tailored directly to human-centered computing. All chapters in the book discuss theoretical and practical issues related to various models and aspects of computational techniques for semantic methods, which are currently studied and developed in many academic and industry centers over the world. The editors hope that the book can be useful for graduate and PhD students of computer science, as well as for mature academics, researchers and practitioners interested in developing of modern methods for representation, processing and distribution of knowledge in the context of human centered computing and by means of computer based information systems. It is the hope of the editors that readers of this volume can find in all chosen chapters many inspiring ideas and influential practical examples, as well as use them in their current and future work.

Users Review

From reader reviews:

Pamela Guarino:

Book is to be different per grade. Book for children until adult are different content. As we know that book is very important for us. The book Semantic Methods for Knowledge Management and Communication (Studies in Computational Intelligence) was making you to know about other expertise and of course you can take more information. It is very advantages for you. The book Semantic Methods for Knowledge Management and Communication (Studies in Computational Intelligence) is not only giving you much more new information but also for being your friend when you feel bored. You can spend your current spend time to read your guide. Try to make relationship using the book Semantic Methods for Knowledge Management and Communication (Studies in Computational Intelligence). You never sense lose out for everything when you read some books.

John Judge:

Reading a book for being new life style in this yr; every people loves to examine a book. When you read a book you can get a lot of benefit. When you read guides, you can improve your knowledge, since book has a lot of information in it. The information that you will get depend on what types of book that you have read. If you need to get information about your examine, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, such us novel, comics, as well as soon. The Semantic Methods for Knowledge Management and Communication (Studies in Computational Intelligence) will give

you new experience in studying a book.

Matthew Ramey:

Is it anyone who having spare time after that spend it whole day simply by watching television programs or just laying on the bed? Do you need something totally new? This Semantic Methods for Knowledge Management and Communication (Studies in Computational Intelligence) can be the reply, oh how comes? A fresh book you know. You are so out of date, spending your free time by reading in this brand new era is common not a geek activity. So what these textbooks have than the others?

Jose Hackler:

What is your hobby? Have you heard that will question when you got students? We believe that that problem was given by teacher with their students. Many kinds of hobby, Everyone has different hobby. So you know that little person similar to reading or as studying become their hobby. You must know that reading is very important as well as book as to be the factor. Book is important thing to increase you knowledge, except your personal teacher or lecturer. You find good news or update regarding something by book. Many kinds of books that can you choose to adopt be your object. One of them is this Semantic Methods for Knowledge Management and Communication (Studies in Computational Intelligence).
