The Conduct of Inquiry in International Relations: Philosophy of Science and Its Implications for the Study of World Politics (New International Relations) By Patrick Thaddeus Jackson

This volume ws the winner of The International Studies Association Theory Section Book Award 2013, presented by the International Studies Association and The Yale H. Ferguson Award 2012, presented by International Studies Association-Northeast.

There are many different scientifically valid ways to produce knowledge. The field of International Relations should pay closer attention to these methodological differences, and to their implications for concrete research on world politics.

The Conduct of Inquiry in International Relations provides an introduction to the philosophy of science issues and their implications for the study of global politics. The author draws attention to the problems caused by the misleading notion of a single unified scientific method, and proposes a framework that clarifies the variety of ways that IR scholars establish the authority and validity of their empirical claims. Jackson connects philosophical considerations with concrete issues of research design within neopositivist, critical realist, analyticist, and reflexive approaches to the study of world politics. Envisioning a pluralist science for a global IR field, this volume organizes the significant differences between methodological stances so as to promote internal consistency, public discussion, and worldly insight as the hallmarks of any scientific study of world politics.

This important volume will be essential reading for all students and scholars of International Relations, Political Science and Philosophy of Science.

Editorial Review

Review

In addition to providing a novel way of organizing approaches to social scientific inquiry in the field, *The Conduct of Inquiry in International Relations* makes insightful and provocative claims about important issues in the philosophy of science. At its heart, Jackson's book is a powerful call for pluralism built on a diverse and inclusive understanding of what it means to do social science. *The International Studies Association Theory Section Book Award, 2013.*

'Jackson has written a practical text that students can use to situate themselves and their works within a given tradition, avoid using certain language and techniques, and produce a coherent work without jumping from one paradigm to another. In this regard, *The Conduct of Inquiry in International Relations* serves as a useful textbook for graduate students and junior researchers. It is a comprehensive, educative and ambitious work that could ease dialogues among scholars from various epistemic communities.' - Mehran Mazinani, *Journal of Critical Realism*, Vol. 11, 4, 2012

'Jackson's book offers a lucid presentation of four traditions of research, illustrated with sympathetic discussions?but also thoughtful critiques?of leading exemplars. *The conduct of inquiry in International Relations* is one of those rare texts that transcends its genre as it constitutes an original analysis of the foundations of social inquiry. One of its achievements is to situate each of the four approaches in distinct philosophical traditions, and to explicate their different genealogies and intellectual and normative commitments.' - Richard New Lebow, *International Affairs*, Vol. 87, 5, September 2011

'*The Conduct of Inquiry in International Relations* outlines a constructive and convincing path for getting beyond unproductive debates about the relative merits of the various methodologies that inform IR. Calling for a post-foundational IR that rests on a more expansive definition of science than that which is conventionally accepted by the field, Patrick Jackson makes a compelling case for an engaged pluralism that is respectful of the different philosophical groundings that inform a variety of equally valid scientific traditions, each of which can usefully contribute to a more comprehensive and informed understanding of world politics.' - J. Ann Tickner, *School of International Relations, University of Southern California*

'This is a book that will have a deep and lasting impact on the field. It displays impressive and sophisticated scholarship, but lightly worn and presented in an engaging manner, student-friendly but never patronising or afraid to challenge the reader. I know no better account of the various ways by which one can study IR scientifically and I am confident that this is a text that will be very widely adopted.' - Chris Brown, *Professor of International Relations, London School of Economics*

'Neatly framed, balanced, informed, lucid and, yes, important, this is the rare book I wish I had written myself. Not that I could have done it nearly as well.' - Nick Onuf

'In this vigorously argued, incisive and important book P.T. Jackson liberates us from the misplaced polarity between "hard, scientific" and "soft, interpretive" approaches that has bedeviled international relations scholarship for half a century. Neither approach has any grounding among philosophers of science with their insistence on the irreducibly pluralist nature of science. The

immense value of this book is its accessibility and the intimate connections it builds between theories of international relations and their philosophical foundations – or lack thereof. Neo-positivist, reflexivist, critical realist and analytical stances can now engage in ecumenical dialogue rather than shouting matches or with silent scorn. If you are accustomed to worship only in your favorite chapel, here is an invitation to visit a magnificent cathedral. Graduate field seminars in international relations now have access to a first-rate text.' - Peter J. Katzenstein, Walter S. Carpenter, Jr. Professor of International Studies, Cornell University

'Not only is *The Conduct of Inquiry in IR* a breathtakingly original and rigorous analysis of the scholarly work in the field, it is also an excellent teaching tool for graduate and upper level undergraduate students. By showing how ontological starting points lead to a variety of methodological options, Patrick Jackson opens up a broad toolkit for the production of knowledge in IR. His use of philosophy of science is both rich and accessible to the unacquainted reader, and brings to the light numerous misunderstandings, false argumentations, and incorrect presumptions that have become common to the field. As a result, *The Conduct of Inquiry* is both revealing and instructive, and a must-read to all who have an interest in reflecting on what's actually being done in IR.' - Gerard van der Ree

'I must confess that I had begun to despair that I would ever read anything regarding the "science question" in International Relations (IR) that did not either founder on the Scylla of philosophical dilettantism or drown in the Charybdis of disciplinary obscuritanism. Patrick Thaddeus Jackson's *The Conduct of Inquiry in International Relations* has cured me of that despair. Skillfully navigating between the twin hazards that have proven fatal to so many earlier efforts, Jackson provides us with a pluralistic vision of scientific inquiry in the field of IR that is philosophically sound yet accessible to non-specialists in the philosophy of science.' - Andrew A Latham, in *Review of Politics*

'The book is very well written, and it does a great job of laying out its methodological taxonomy. It presents a lot of philosophy to an IR audience in a clear, concise, and accurate way.' - Daniel McArthur, in *Education and Culture: The Journal of the John Dewey Society*

About the Author

Patrick Thaddeus Jackson is Professor of International Relations and Associate Dean for Undergraduate Education in the School of International Service at the American University in Washington, DC. He is the author of *Civilizing the Enemy* (2006) and the co-editor of *Civilizational Identity* (2007).

Users Review

From reader reviews:

Jeff Puckett:

Book is written, printed, or created for everything. You can understand everything you want by a guide. Book has a different type. We all know that that book is important point to bring us around the world. Next to that you can your reading talent was fluently. A reserve *The Conduct of Inquiry in International Relations: Philosophy of Science and Its Implications for the Study of World Politics* (New International Relations) will make you to be smarter. You can feel far more confidence if you can know about anything. But some of you think that open or reading a book make you bored. It is far from make you fun. Why they can be thought like

that? Have you seeking best book or ideal book with you?

Mary McKay:

Do you have something that you want such as book? The reserve lovers usually prefer to pick book like comic, small story and the biggest the first is novel. Now, why not trying The Conduct of Inquiry in International Relations: Philosophy of Science and Its Implications for the Study of World Politics (New International Relations) that give your satisfaction preference will be satisfied through reading this book. Reading behavior all over the world can be said as the means for people to know world a great deal better than how they react to the world. It can't be stated constantly that reading addiction only for the geeky individual but for all of you who wants to be success person. So , for every you who want to start studying as your good habit, you may pick The Conduct of Inquiry in International Relations: Philosophy of Science and Its Implications for the Study of World Politics (New International Relations) become your starter.

Peggy Elmore:

As a college student exactly feel bored to reading. If their teacher requested them to go to the library or even make summary for some publication, they are complained. Just very little students that has reading's heart or real their leisure activity. They just do what the educator want, like asked to the library. They go to presently there but nothing reading very seriously. Any students feel that examining is not important, boring in addition to can't see colorful pics on there. Yeah, it is for being complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. So , this The Conduct of Inquiry in International Relations: Philosophy of Science and Its Implications for the Study of World Politics (New International Relations) can make you sense more interested to read.

Olive Griffin:

Reading a e-book make you to get more knowledge from this. You can take knowledge and information from the book. Book is created or printed or illustrated from each source which filled update of news. With this modern era like at this point, many ways to get information are available for you actually. From media social such as newspaper, magazines, science reserve, encyclopedia, reference book, book and comic. You can add your knowledge by that book. Do you want to spend your spare time to spread out your book? Or just seeking the The Conduct of Inquiry in International Relations: Philosophy of Science and Its Implications for the Study of World Politics (New International Relations) when you needed it?
